# NORDIC - VIRTUAL SUMMIT - #NVSummit2021

# In the beginning

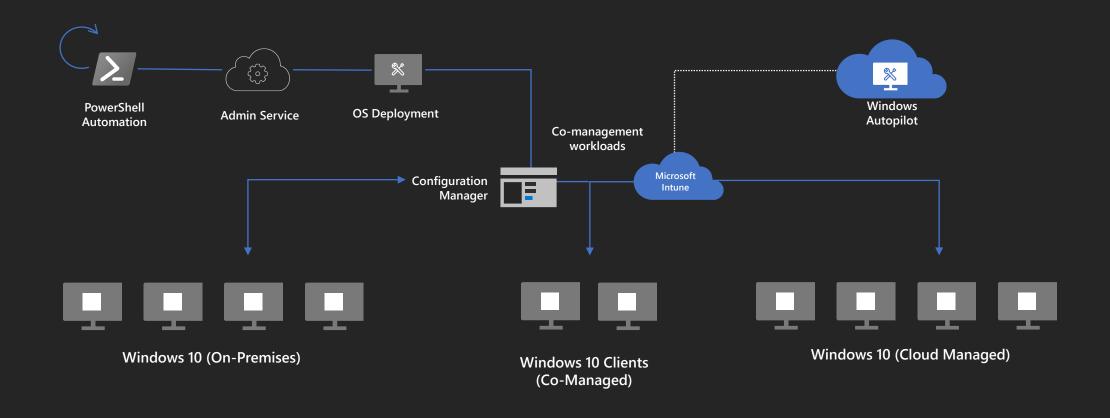

#### The Challenges of moving to "modern"

- Decades old processes are often hard to let go of
- Internal blockers from staff
- Comparing like for like and focusing on the missing components
- The "it won't work" approach

Let us understand the differences first, and work around them, and show you some cool stuff

### Traditional Processes vs Modern Processes

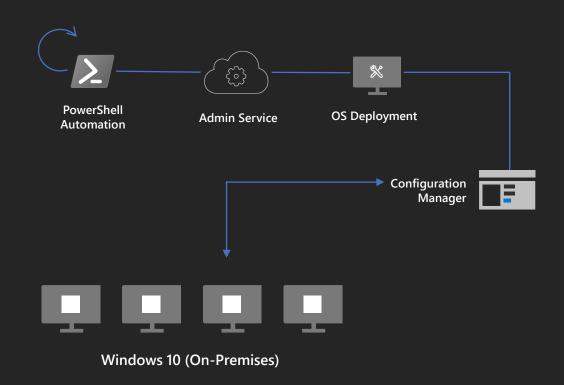

# Traditional OSD (ConfigMgr) Overview

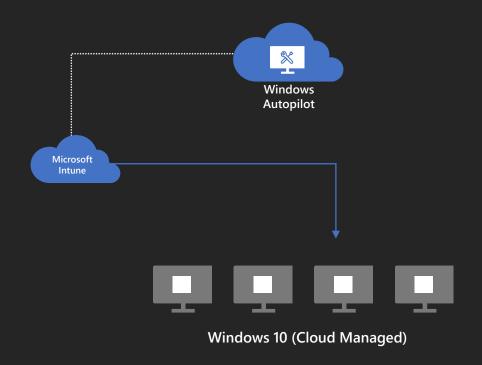

- OS Deployment
  - Traditional method
  - Admin Service
  - Custom Web Service
  - Custom Front Ends
  - PowerShell
- Post OS Maintenance
  - PowerShell
  - OEM Software

# Intune Management Overview

- Windows Autopilot
  - Win32 Apps
  - PowerShell
- Post Deployment
  - How to control driver and firmware updates post provisioning?
  - OEM software solutions?
  - Microsoft solutions (coming)

# The Challenge We Face Today

- Organisations have had to make big shifts in the way they manage devices
  - Home workers are now the norm
  - The desire to use Intune managed devices has seen massive growth due to this
- IT departments which to maintain the status quo
  - Provide the business with like for like functionality
  - Automate as much as possible
  - Port existing automation processes as much as possible

# Give me all the laptops

### The challenge of supporting multiple vendors

- Due to the pandemic, a single vendor choice is something we no longer have the luxury of
- The traditional OS deployment model is being evaluated
- Can Windows Autopilot serve the needs of the organisation?

"Make IT happen" – no excuses!

### OEM Solutions for Intune devices

Most OEM's provide solutions, not all are equal....

Built in support for driver and firmware updates through WUfB

Lenovo System Update

### HP Solutions for Intune devices

HP Client Management Script Library
How to do things the right way

- Install the CMSL from the PowerShell Gallery
  - Install-Module –Name HPCMSL\*

The NuGet Package Provider needs to be updated The PowerShellGet module needs to be updated

 Automate driver and BIOS updates via PowerShell This sounds a bit more familiar

# Demo

Install and Maintain the HP CMSL Module (Proactive Remediations)

# HP Windows Update Voodoo

- Support for firmware updates through the normal update process
- Leverages a mechanism built into the Unified Extensible Firmware Interface (UEFI) standard called UEFI Capsule
- Worried? Need to disable this?

Set-HPBIOSSettingValue -Name "Native OS Firmware Update Service" -Value "Disable"

h10032.www1.hp.com/ctg/Manual/c06696094

# Building an OEM scripted solution

- Upgrade the HP BIOS
  - Get-HPBIOSUpdates
    - List all available updates
  - Get-HPBIOSUpdates –Flash
    - Update system to the latest BIOS release
- Install all SoftPaqs
  - Get-SoftPaqList | Get-SoftPaq –Action Install
    - Download, extract, and install the latest drivers

Easy right!?..

```
Administrator: Windows PowerShell

# Demo

Running the CMSL

# Proceed with Caution

### Control Is Good

Driver and BIOS / Firmware updates can have undesired results

- Administrative Control / Phased Upgrades
  - Providing a controlled method for testing upgrades is key to many organisations
  - It verifies stability prior to mass deployment
  - Consistent experience as we have today with Configuration Manager

# Demo

Modern BIOS Management - Intune BIOS Control

## Driver Automation Tool V7

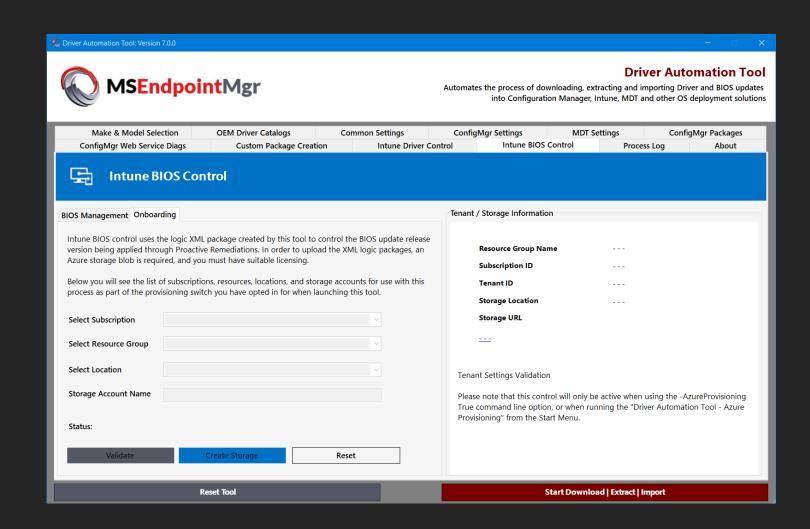

#### **New Features**

- Intune XML control support
- Intune Only mode
- Intune XML control support
- Azure storage blob creation (Provisioning mode)
- Azure storage blob uploads (XML & packages)
- Automatic updating

#### In Progress

• Win32 driver packages

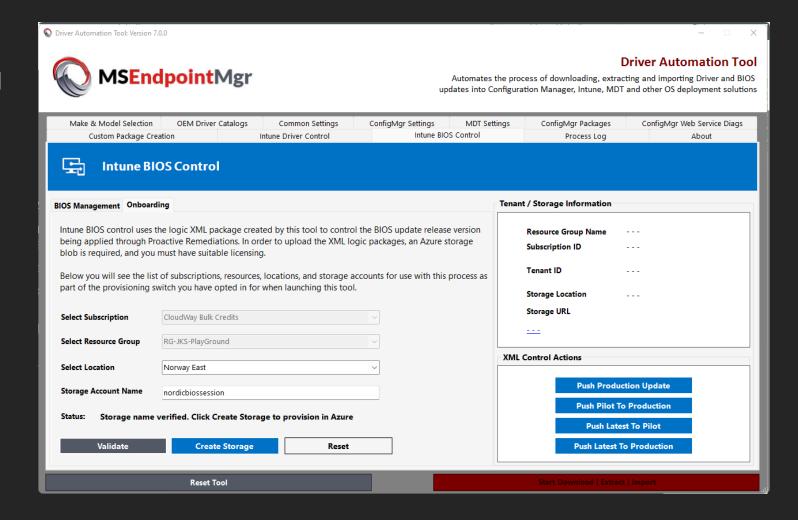

### Driver Automation Tool V7

#### Azure Provisioning Mode

- Requires an Azure Subscription and available resource group
- Region selectable in the UI
- Validation of the storage account name
- Creation of the storage account through the UI
- Details stamped in the registry for future use

Driver Automation Tool: Version 7.0.0

#### **Driver Automation Tool**

Automates the process of downloading, extracting and importing Driver and BIOS updates into Configuration Manager, Intune, MDT and other OS deployment solutions

#### Azure P

Driver Automation Tool: Version 7.0.0

#### **Driver Automation Tool**

Automates the process of downloading, extracting and importing Driver and BIOS updates into Configuration Manager, Intune, MDT and other OS deployment solutions

#### ORDIC IRTUAL SUMMIT

About

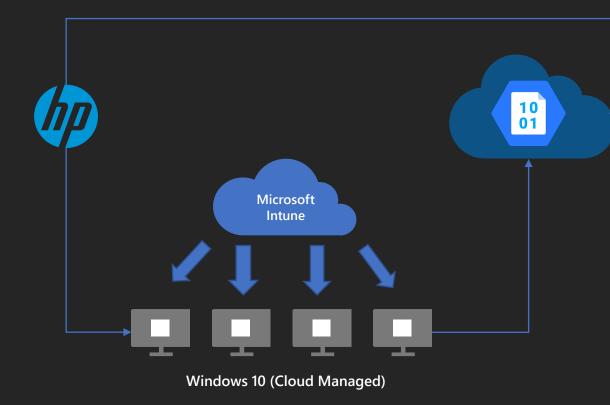

#### Azure Pi

- Require availab
- Region
- Validat name
- Creatid throug
- Details future

### Intune Driver & BIOS Control Workflow

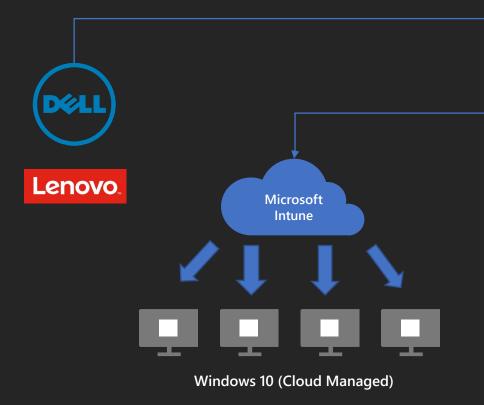

- 1. Driver Automation Tool launched, and selections made
- 2. HP Cabinet downloaded and XML extracted
- 3. XML created from selected models
- 4. Azure storage blob created if required
- 5. XML uploaded to Azure
- 6. Proactive Remediation PowerShell checks XML in Azure, and uses version information to update targeted systems
- 7. Updates are downloaded and installed via CMSL from HP

# In Progress.. Dell & Lenovo Support

- 2. OEM sources queried
- 3. Win32 packages created with WIM compression and PowerShell injection script
- 4. Package uploaded to Azure
- 5. Win32 application(s) containing updated drivers / firmware targeted at devices
- 6. Win32 package downloaded and installed

# Demo

**Driver Automation Tool V7** 

# Intune BIOS Control (Beta)

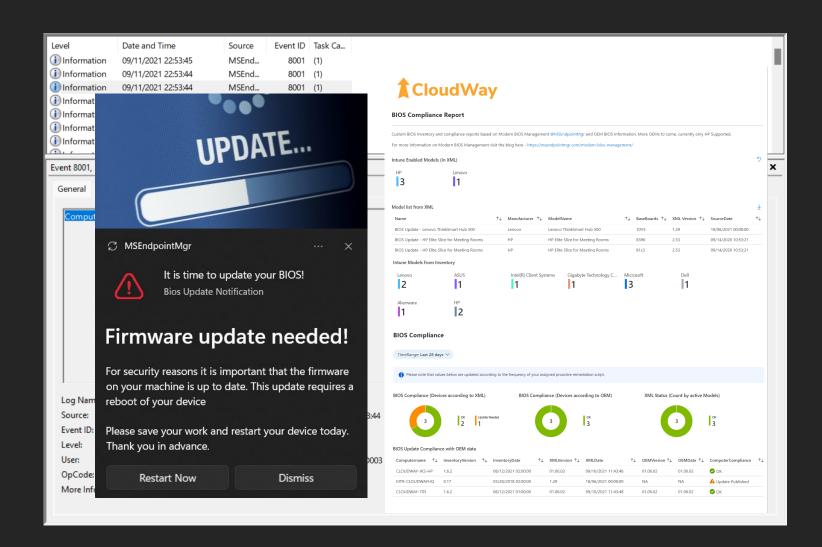

#### Framework

- Driver Automation Tool
- Proactive Remediation Scripts
- Log Analytics Workbook
- Event viewer logging
- User toast notifications with corporate branding option

#### In Progress

- Multivendor support\*
- Azure key vault storage\*
- Win32 driver packages

# Intune BIOS Control (Beta)

# Demo

Intune BIOS Control

# Intune BIOS Control (Beta)

#### Beta Release Information

- Blog to be published on the MSEndpointMgr.com blog on **Monday 15**th **of November**
- Driver Automation Tool V7, Proactive Remedation Scripts, and Log Analytics Workbook JSON will be made available at the same time
- Initially ONLY for HP, but Dell to follow by the end of November, and Lenovo in December

#### Coming in early 2022

- Multivendor support
- Azure key vault storage
- Win32 driver packages

# Thank you!
